

CIPA CERTIFICATION

Addition Networks hereby certifies that its Web Content Filtering complies with the requirements of the Children's Internet Protection Act ("CIPA").

Specifically, Addition Networks' SHARK UTM provides Web Content Filtering, a technology protection measure that protects against Internet access to websites containing visual depictions which are considered to be obscene, child pornography or harmful to minors, as those terms are defined by CIPA, by blocking access to websites that contain such visual depictions.

While Addition Networks uses its best efforts to prevent Internet access to websites containing visual depictions which are considered to be obscene, child pornography or harmful to minors, Addition Networks cannot guarantee that the Web Content Filtering will block access to each and every website that may contain such visual depictions. If you find that Web Content Filtering failed to block access to a website that contained visual depictions which are obscene, child pornography or harmful to minors, please notify Addition Networks immediately.

Additionally, this software allows you to override it's default configuration by allowing or denying access to websites you specify, and as such the certifications made herein do not apply if you make changes to the default behavior of the web content filtering system.
